Step 1: Confirm you have the correct size fenders for your bike. The maximum recommended tire size for these fenders is 700 x 35mm. Mounting front fender: Stick the appropriate length fork crown bolt (D) with washer (F) through the attached tab on the front fender, then through the hole in the fork crown. Tab can mount in front or behind fork for best fit. Secure with lock nut (G) and washer (F) while keeping the fender centered over the tire. You will need to use both an 8mm box wrench (K) and 4mm hex wrench (L). Tighten to 45lnlbs or 5.1 Nm.

Note for disc brakes: If you have disc brakes, thread a 40mm bolt (C) through the Release tab/Stay Assembly, then through one of the cylindrical spacers (H), and finally into the eyelet of your fork (disc brake caliper side only). This should get the stays clear of the brakes.

Step 2: Your fenders come with Release Tabs on the front fender that are designed to release the fender stays from the fork if debris becomes lodged in between tire and fender. Using the 12mm bolts (A) and washers (F), bolt the Release tab/Stay Assembly to the outside of the threaded eyelets on your fork (use lower eyelets if you have two per side). Tighten to 20 lnlbs or 2.3 Nm.

Step 3: Front fender adjustment: Loosen the 10mm nuts that attach the stays to the front fender and position the fender so that it conforms to the curvature of the tire without rubbing. Make sure you have a minimum of 10 millimeters of clearance between the tire and fender. You may have to adjust the height of the tab mounted to the fork crown [see step 1] to achieve this clearance. Tighten the nuts snugly, but don’t use all of your strength or you risk breaking the hardware. Tighten to 30 lnlbs or 3.4 Nm. Check for toe overlap by placing one foot on the pedal positioned at the most forward position. Turn the front wheel, if the tire or fender hits your foot we do not recommend using these fenders.

Step 4: Mounting rear fender: Remove rear wheel to install rear fender. Using two 12mm bolts (A) and two washers (F), bolt the fender stay to the outside of the threaded eyelets on the frame. Tighten to 35 lnlbs or 4 Nm.

Note for disc brakes: If you have disc brakes, thread a 40mm bolt (C) through the stay, then through one of the cylindrical spacers (H), and finally into the eyelet of your frame [disc brake side only]. This should get the stays clear of the brakes.
Step 6: Install rubber shim (J) onto metal clip (E) making sure the rubber wraps around the edges of the metal clip completely. Bolt the metal clip to the seat stay bridge using the 25mm bolt (B) and washer (F). Secure with lock nut (G) and washer (F). Tighten to 45 Inlbs or 5.1Nm. Attach rear wheel to bike. With rear fender centered over the tire, bend the metal clip over the top contour of the fender. Then with a pliers crimp the four tabs [two on each side] around the edges of the fender. Be sure tabs hold fender in place securely.

Step 7: Rear fender adjustment: Loosen the 10mm nuts that attach the stays to the rear fender and position the fender so that it conforms to the curvature of the tire without rubbing. If there is less than 10mm of clearance between the clip and the tire, do not use the fenders. Tighten the nuts snugly, but don’t use all of your strength or you risk breaking the hardware. Tighten to 30 Inlbs or 3.4 Nm.

Step 8: Check complete installation to ensure hardware is tight and proper clearance is given between the tires and the fenders. Don’t forget to tighten down the zip tie [if used] and cut off the extra.

---

**GOOD GEAR GUARANTEE**

We make quality products and they include a limited lifetime warranty to the original owner of our products. These fenders are warranted to be free from defects in materials and workmanship for as long as the original purchaser owns the product. This warranty does not cover damage due to accident, abuse, or normal wear and tear. This warranty is void if the fenders or fender mounting hardware are modified, or are not properly installed on a bicycle for which they were designed. To make a claim under this warranty, return the fenders together with proof of purchase to the retail dealer from which they were purchased or contact Planet Bike directly. Purchaser’s sole remedy pursuant to this warranty is for Planet Bike to repair or replace the faulty part(s). Planet Bike provides no other warranty, expressed or implied. This warranty gives you specific legal rights; you may also have other rights which vary from state to state.

---

**WARNINGS**

- Check overlap [touching your foot on the fender or wheel while turning] as described in step 3. If there is interference between your toe and front wheel, we do not recommend using these fenders.
- Check for interference with other bike components, especially brakes and drive train. If interference is present readjust fenders. If interference remains, do not use the fenders.
- There must be a minimum clearance of 10mm between the tire and fender. If you do not have this clearance, fender use is not recommended.
- It may be necessary to install narrower tires on your bicycle to create appropriate space between the tires and fenders.
- Any modification to the fender installation instructions is not recommended. Failure to follow installation instructions can result in loss of control, damage, personal injury or death.
- We do not recommend transporting bike with mounted fenders on an automobile or bus bike rack. Forces exerted on fenders at high speeds have the potential of damaging the fenders.
- Check fender installation before each ride to ensure hardware is tight and in good condition and fender is centered over tire with a minimum of 10mm of clearance.
- If release tab is released, inspect for damage. Replace damaged release tabs immediately and reassemble tabs.
- These fenders are not intended for off road riding, competitive use, or excessive speeds.
- To keep the fenders functioning safely, replace worn parts as needed. Small parts can be found at [www.planetbike.com](http://www.planetbike.com)
- If you are unsure of any part of the installation process please consult a certified bicycle mechanic.
- For the most up to date installation instructions, go to [www.planetbike.com](http://www.planetbike.com)
